

Managed IT

MicroSystems

Your business is our business!

Managed IT support options provide out-sourcing services for small, mid sized and large enterprise. Services can be designed fit-for-purpose and may include Hosted solutions, Help Desk, Server/Desktop/LAN/WAN /PBX and Administration support services.

We are a team of skilled IT engineers and consultants that support a range of organisations with day-to-day technology needs, or IT projects.

All Managed IT clients also qualify for discounted labour rates.

Outsourcing the management of your IT services with support options such as Prevention Plus, allows you to refocus your efforts on your core business while we monitor, patch, upgrade, and support your network and desktop infrastructure. This proactive maintenance approach effectively mitigates network problems, often leading to fewer and less severe incidents. Because all systems are monitored if anything ever does happen, it can be addressed quickly.

The potential benefits of selective out-sourcing are numerous, and DMS can deliver them all: greater productivity, efficiency and economy with access to better skills and secure technology.

What sets DMS apart from other managed service providers is our ability to closely align with a client's culture. This approach lets us deliver improvements in business processes and greater efficiencies for clients - with resulting business benefits. The strength of our long-term relationships with major vendors can also provide significant cost savings in software and hardware.

Our value to clients is enhanced by our superior hosting services. We can offer complete solutions so organisations can gain secure, problem-free access to essential business applications, freeing them to concentrate on core competencies.
